

Cabin Emergency Training - CET Training

Cabin Emergency Training or CET is a practical emergency procedures training program, specifically developed for business aviation crewmembers. The training is conducted in our business jet cabin trainer, the only one of its kind in the United Kingdom. Corporate Flight Trainings Cabin Emergency Training focuses on the management of emergency situations, passenger coordination and the command of business jet specific emergency drills in real time.

This immersive training program will ensure crew members receive valuable experience in the handling of emergency situations and an opportunity to experience the complexities of managing emergencies within the single flight attendant or pilot only environment. The course is aimed at business aviation pilots, cabin service representatives and freelance corporate flight attendants who wish to keep their training up to date and relevant. It is ideal for operators who use non regulated cabin crew as a cost effective training solution or as an addition to our ONJET VIP Flight Attendant Training program.
